Galaxy	EL-96200-SAT	<p>Satellite™ (check point station) per workstation</p> <ul style="list-style-type: none"> Satellite is used to control and monitor entry and exit at one or more internal locations or "check points" for visitors who have already been badged at an SVM workstation. Upon arrival at a Satellite station, the visitor badge is scanned (via barcode), and the Satellite station will display the visitor's photo, name and Clearance level and immediately inform the operator whether to allow the visitor entry into that area or whether to deny entry. The Clearance level is assigned to each visitor when they are badged by SVM. Satellite time stamps the visitor's entry and exit at that station via barcode scan. Satellite can also be used with EasyLobby's Gate Controller solution to open up to 4 gates or turnstiles or doors when a valid barcoded badge is scanned/read at those devices. Customers must purchase 1 copy of Satellite for each location where this type of internal control and monitoring is desired Satellite cannot create new visitor records, modify existing records, or print badges; it is a supplement to the SVM security architecture, not a substitute for SVM. 	\$1,200.00	35%	\$780.00	35%

Galaxy	90-3603-11	AH-1051: Pioneer Stealth Touch-M7 w/Win7 All in One CPU and flat panel touch screen computer.(Customizable for Global & EDU). Its versatile design allows the PXi to fit well into many applications. When used as Point-Of-Sales, it will reduce training costs and allow employees to give better customer service. Or it can be setup as self-service kiosks where customers will be able to do their own transactions. With its powerful video processor, the PXi will also serve well as a Point-Of-Information kiosk, like playing multimedia presentation for product promotions or employee training. The video processor supports dual application/dual display, hence allowing you to connect another CRT/display running another application independently from the PXi.
